“ The first day I went there, they started to teach me how to master WordPress, and I still learn new things till now. Everyone in the company is nice and helpful, they answered my millions questions and did not look unhappy about it. The major tasks that I was assigned to was to fix and changes on the webpages that our company hosted based on clients' request. Also I was taught to develop a few website, both content and structure were included. So I was really happy about learning to use WordPress on the backend. I have seen a lot of the websites that the company has designed which definitely opened my horizon on web designing. Besides that, I think I definitely need to learn to figure things out by myself instead of constantly asking for others' help. I realize that I need to be more independent in jobs. I have grown as a person and a professional greatly during this internship so much thanks to IEP for everything.

Xiaoqian Niu - USA

Internship

COMPANY: Website Design

About the Host Company:

Currently we maintain 350+ websites for our clients and have around 30+ websites on page 1 of Google for their chosen search terms. We maintain these websites on a daily basis and make updates / changes on request from the clients. Add pages or galleries, edit existing content and or delete as necessary.

The majority of our sites are built with Wordpress. It is important for a person who is joining our group to get familiar with Wordpress basics before they start.

The Intern is tasked with the following, but not limited to:

Change request to website vary in their difficulty and frequency. The daily, weekly and monthly tasks will be structured to your knowledge and capability. You will learn a lot as you progress through your placement and tasks will become more complex as you learn. Along with that we maintain a lot of our own websites and you will be required to have some input there too.
